Personal information

Born in GAGLIANO DEL CAPO (LE), ITALY, 18/10/1994

Citizenship: ITALIAN

Education - Work experience

- 01/09/2026 - Present: **Maître de Conférences (Associate Professor)**
Institution: Institut de Mathématiques de Toulouse, INSA Toulouse (Toulouse, France)
Department: Department of Mathematical and Modeling Engineering
- 01/10/2023 - 31/08/2026: **Postdoctoral researcher**
Institution: École polytechnique (Palaiseau, France)
Laboratory and group: CMAP (Centre de Mathématiques Appliquées), HPC@Maths group
Funding: OPEN NUM DEF project (PI Prof. Marc Massot, Dr. Loïc Gouarin, Dr. Teddy Pichard (Maître de Conférences))
Supervisor: Prof. Marc Massot
Research topic: Development of numerical methods for liquid-gas two-phase flows with multi-scale modelling.
- 01/02/2023 - 30/09/2023: **Research fellowship (post-doc)**
Institution: Politecnico di Milano (Milan, Italy)
Laboratory: MOX - Department of Mathematics
Funding: ESCAPE-2 H2020, projet Grant Agreement No. 800897
Supervisor: Prof. Luca Bonaventura
Research topic: Development of discontinuous finite elements codes for atmosphere dynamics simulations in the framework of deal.II library.
- 01/11/2019 - 31/01/2023: **Phd candidate** for the programme MATHEMATICAL MODELS AND METHODS IN ENGINEERING
Institution: Politecnico di Milano (Milan, Italy)
Laboratory: MOX - Department of Mathematics
Supervisor: Prof. Luca Bonaventura
Co-supervisor: Prof. Paolo Francesco Barbante
Research project: Modelling and simulations of two-phase flows including geometric variables
Defence: 18/04/2023, Milan, Italy
Commission:

Prof. Davide Carlo Ambrosi	Politecnico di Torino	President
Prof. Simone Scacchi	Università degli Studi di Milano	Member
Prof. Luca Formaggia	Politecnico di Milano	Member
- 29/11/2021 - 15/07/2022: **Visiting student at CMAP** (Centre de Mathématiques Appliquées), École polytechnique (Palaiseau, France)
- 2016 - 2019: **Master of Science Degree** in MATHEMATICAL ENGINEERING
Track: Computational Science and Engineering
Institution: Politecnico di Milano (Milan, Italy)
Thesis: Development of a reactive numerical solver based on the SU2 CFD code (discussion 03/10/2019)
Supervisor: Prof. Paolo Francesco Barbante
Mark: 110/110
- 2013 - 2016: **Bachelor of Science Degree** in MATHEMATICAL ENGINEERING
Institution: Politecnico di Milano (Milan, Italy)
Thesis: Equazioni ellittiche degeneri strutturate su campi di Hörmander (discussion 22/09/2016)

Supervisor: Prof. Marco Bramanti

Mark: 107/110

- 2013: **Diploma:** General High School

Institution: Istruzione di Istituto Superiore G. Stampacchia (Tricase (LE), Italy)

Mark: 100L/100

Training Programmes

- 2018: Introductory course on **GPU** computing for Fluid Dynamics applications
<https://github.com/giuseppeorlando/MilanoGPU2018>
- 2019: Crash course on Vehicle Aerodynamics

Technical skills

- Programming languages
 - **C (MPI), C++, MATLAB, FreeFem++, Python:** Academic level with the development of several projects
https://github.com/giuseppeorlando/Progetto_ANEDP
https://github.com/giuseppeorlando/TwoPhase_Flow

C++ code for incompressible Navier-Stokes equations included in the official deal.II code-gallery
(https://dealii.org/developer/doxygen/deal.II/code_gallery_NavierStokes_TRBDF2_DG.html)

Development of a dynamical core pour atmosphere dynamics
(https://github.com/giuseppeorlando/Atmospheric_Flows/tree/Mesoscale)

Development of codes in the open-source framework samurai
(https://github.com/hpc-maths/2025_09_two_fluid_all_topology, https://github.com/hpc-maths/2026_06_two_scale_isothermal)

- R, Mathematica: Basic level
- Other
 - Jupyter, Paraview:** Academic level

Language skills

- Italian: Mother language
- British English: B2 Level, TOEFL iBT Certificate, Mark 86/120
- French: Written: fair, Spoken: fair

Computer skills

- Operating systems
Windows, **Linux**
- Text and spreadsheets
Microsoft Office, **LaTeX**

Research interests

- Main research interests: Computational Fluid Dynamics (**CFD**), Discontinuous Galerkin (**DG**) methods, Two-phase flows, Numerical Weather Predictions (**NWP**), low Mach flows, **IMEX** time discretization methods, **variational** modelling
- Other research interests: Monotonization techniques, shallow water equations (**SWE**), lava flow models, Scientific Machine Learning (**SciML**)

Outline of research activity

My research activity has been mainly focused on the field of Computational Fluid Dynamics (**CFD**), spanning a wide range of applications, starting from my Master thesis on the development of a numerical solver for reactive flows, with a particular emphasis on approaches which are robust in the case of vanishing species [26].

During my PhD studies [25], I started to focus on the modelling and simulations of **two-phase flows**, which represents one of my actual main research topic. In particular, I took into account geometric variables, such as the interfacial area density, whose accurate computation is a prerequisite in order to obtain reliable values of phase exchange terms [9], and the interface mean curvature [20]. This allowed me to spend some months abroad and to start a collaboration with Centre de Mathématiques Appliquées (CMAP) at École polytechnique, where I have been a postdoctoral researcher before moving to Institut de Mathématiques de Toulouse, INSA Toulouse as Maître de Conférences (Associate Professor). My first publication [14] deals with the development of an efficient numerical scheme for the incompressible Navier-Stokes equations. The proposed approach combines flexible discontinuous finite element space discretizations with efficient semi-implicit time discretization methods and employs an artificial compressibility formulation in order to overcome some well known issues of projection methods. An extension of this approach to two-phase flows has been proposed [8].

The first significant contribution to the literature is presented in [13] and represents a non straightforward extension to the compressible Navier-Stokes equations of real gases of **IMEX** approaches originally employed for ideal gases. More in detail, a suitable fixed point loop has been introduced for the general cubic equation of state, which can effectively handle experimental data. A discontinuous Galerkin (**DG**) spatial discretization has been employed, so as to easily achieve a full second-order method. Moreover, suitable refinement indicators have been introduced for non-ideal gases, so as to effectively use Adaptive Mesh Refinement (**AMR**). An analysis of the employed second order IMEX-RK method has been carried out, providing an improvement in terms of absolute monotonicity. Moreover, an analysis of a general class of IMEX-RK methods in terms of asymptotic-preserving (**AP**) property has been recently performed [5] and higher order methods with respect to that employed in [13] have been validated [4, 5].

I also focused on the application of the IMEX scheme proposed in [13] to atmosphere dynamics and Numerical Weather Prediction (**NWP**) [11, 23], showing the effectiveness of the method in a number of test cases even with non-trivial and real orography profiles. For the first time in the literature, the robustness of the method using non-conforming meshes [7] and curved elements [6] for flows over orography has been proven. The efficiency of the proposed method and solver have been demonstrated in [18, 19]. Finally, the solver has been extended to rotating atmospheric flows in [23], as part of the Master's thesis of Letizia Bottani (double-degree programme between Politecnico di Milano and DTU), which I co-supervised.

In addition, I developed a filtering monotonization technique [12] in order to avoid (or at least reduce) the oscillations that arise when high order discretization methods are used. Its potentialities have been shown in a number of benchmarks, including test cases for the Euler equations of gas dynamics.

Furthermore, I also tested for the first time in the literature to use Large Language Models **LLM** for the development of solvers for PDEs based on the finite element method [10].

Nowadays, I am mainly working on the modelling and simulations of **two-phase flows**, with particular emphasis on the derivation of models through **variational** principles [3, 15–17, 21] and on the analysis of a hierarchy of Baer-Nunziato type models for compressible two-phase flows [2]. Furthermore, I am working on the development of robust and accurate models for the shallow water (de Saint-Venant) equations [1], including lava flow models [24], as well as on development of high-order IMEX-RK methods for (degenerate) diffusion-reaction equations [22].

Scientific publications

PhD thesis

- [25] G. Orlando. "Modelling and simulations of two-phase flows including geometric variables". <http://hdl.handle.net/10589/198599>. PhD thesis. Politecnico di Milano, 2023.

Master thesis

- [26] G. Orlando. *Development of a reactive numerical solver based on the SU2 CFD code*. <http://hdl.handle.net/10589/150021>. Master thesis, Politecnico di Milano. 2019.

Principaux développements technologiques

- G. Orlando. Development of a two-scale two-phase flow model for the separate-to-disperse phase transition in atomizing flows [16, 21] (approximately 3000 lines of code), 2026. GitHub repository.
- G. Orlando. Development of an all-topology two-fluid model for two-phase flows derived from Hamilton's Stationary Action Principle [3] (approximately 3000 lines of code), 2025. GitHub repository.
- G. Orlando. Development of a dynamical core for atmospheric flows [7, 11] within deal.II (approximately 7,000 lines of code), ongoing. GitHub repository.
- G. Orlando. Development of an incompressible Navier–Stokes TRBDF2-DG solver [14], included in the official deal.II code gallery (approximately 3,500 lines of code), 2022. deal.II Code Gallery.

Editorial activity

- 01/01/2026 - : Associate editor for *Monthly Weather Review* (MWR)
- I have acted as a referee for international journals in Mathematical Modelling and Scientific Computing: *Computers and Mathematics with Applications* (CAMWA), *Journal of Computational Physics* (JCP), *Computer & Fluids* (CAF), *Monthly Weather Review* (MWR), *International Journal on Geomathematics* (GEM).

Main conferences participation

- 12th International Conference on Numerical Methods for Multi-Material Fluid Flow (MultiMat 2026)
Date and Location: 11/09/2026, Biarritz (France)
Title and Duration: "A two-scale two-phase model for the separated-to-disperse phase transition by atomization", 30 minutes
- **Invited talk** in the minisymposium "Advances in Computational Models and Methods for Multiphase Flows with Phase Change" at 17th World Congress on Computational Mechanics – 10th European Congress on Computational Methods in Applied Sciences and Engineering (WCCM – ECCOMAS 2026)
Organizers: L. Brandt, S. Jain, M. Pelanti, M. Rodriguez, and A. Roccon
Date and Location: 21/07/2026, Munich (Germany)
Title and Duration: "A unified compressible two-phase, two-scale model with inter-scale mass transfer for separated-to-disperse transitions in atomizing flows", 15 minutes
- **Invited seminar** for Workshop Comfluans
Date and Location: 07/07/2026, IMAG, Montpellier (France)
Title and Duration: "A unified compressible two-phase, two-scale model with capillarity for separated-to-disperse transitions in atomizing flows", 45 minutes
- 4th International workshop on Perspectives on Multiphase Fluid Dynamics, Continuum Mechanics and Hyperbolic Balance Laws (ProHyp2026)
Date and Location: 02/06/2026, Strasbourg (France)
Title and Duration: "An *all-topology* two-fluid model for two-phase flows derived from Hamilton's Stationary Action Principle", 30 minutes
- **Invited seminar** for the series "Séminaire Analyse Appliquée (AA)" at I2M (Institut de Mathématiques de Marseille)
Date and Location: 31/03/2026, Marseille (France)
Title and Duration: "An *all-topology* two-fluid model for two-phase flows derived through Hamilton's Stationary Action Principle", 45 minutes
- Speaker Flash workshop
Date and Location: 02/02/2026, Palaiseau (France)
Title and Duration: "A unified compressible two-phase, two-scale model with capillarity for separated-to-disperse transitions in atomizing flows", 50 minutes
- **Invited speaker** at 38ème séminaire de mécanique des fluides numérique
Date and Location: 26/01/2026, Paris (France)
Title and Duration: "A unified compressible two-phase, two-scale model with capillarity for separated-to-disperse transitions in atomizing flows", 40 minutes
- **Invited seminar** for the series "Séminaires de Mathématiques et de leurs Applications" at LMAP (Laboratoire de Mathématiques et de leurs Applications, Pau)
Date and Location: 22/01/2026, Pau (France)
Title and Duration: "An adaptive high-order DG solver for the shallow water equations with irregular bathymetry", 45 minutes
- **Invited speaker** at ARIA (Accurate ROMs for Industrial Applications) 2025 workshop
Date and Location: 23/09/2025, Biarritz (France)
Title and Duration: "A high-order matrix-free adaptive DG solver for the shallow water equations with irregular bathymetry", 30 minutes

- **Invited talk** in the minisymposium “High-Order and Innovative Methods for Coupled Problems in Life Science and Geophysics” at 11th International Conference on Coupled Problems in Science and Engineering (CO’UPLED 2025)
Organizers: F. Bonizzoni, M. Corti, and S. Pagani
Date and Location: 27/05/2025, Villasimius (Italy)
Title and Duration: “A high-order solver for NWP using non-conforming adaptive and curved meshes: applications to flows over orography”, 15 minutes
- 12th International Conference on Multiphase Flow (ICMF 2025)
Date and Location: 14/05/2025, Toulouse (France)
Title and Duration: “A unified two-scale gas-liquid two-fluid model with capillarity and interface regularization through a mass transfer between scales”, 15 minutes
- **Invited seminar** for the series “Séminaire de Calcul Scientifique et Modélisation” at IMB (Institut de Mathématiques de Bordeaux)
Date and Location: 10/04/2025, Bordeaux (France)
Title and Duration: “Asymptotic-preserving IMEX schemes for the Euler equations of non-ideal gases”, 45 minutes
- **Invited speaker** at Seminar Mathematics and Atmospheric Physics
Date: 23/10/2024
Title and Duration: “Robust and accurate simulations of flows over orography using non-conforming variable resolution meshes”, 45 minutes
- Seminar HPC@Maths
Date and Location: 18/10/2024, Palaiseau (France)
Title: “Numerical analysis of a two-fluid model”
- European Meteorological Society (EMS) Annual Meeting
Date and Location: 06/09/2024, Barcelona (Spain)
Title and Duration: “Robust and accurate simulations of flows over orography using non-conforming variable resolution meshes”, 15 minutes
- 2nd BICTAM-CISM Symposium on Dispersed Multiphase Flows: from Measuring to Modeling
Date and Location: 22/08/2024, Beijing (China)
Title and Duration: “A unified two-scale gas-liquid two-fluid model with capillarity and interface regularization through a mass transfer between scales”, 15 minutes
- International Conference on Numerical Methods in Multiphase Flows - 5 (ICNMMF-5)
Date and Location: 28/06/2024, Reykjavik (Iceland)
Title and Duration: “A two-scale model for two-phase flows including mass transfer”, 15 minutes
- **Invited talk** in the minisymposium “Computational Methods for Multiphase Flows with Liquid-Vapor Transition” at 9th European Congress on Computational Methods in Applied Sciences and Engineering (ECCOMAS 2024)
Organizers: L. Brandt, M. Pelanti, M. Rodriguez, and S. Tanguy
Date and Location: 06/06/2024, Lisbon (Portugal)
Title and Duration: “A two-scale model for two-phase flows including geometric variables and mass transfer”, 15 minutes
- 46ème Congrès National d’Analyse Numérique (CANUM 2024)
Date and Location: 29/05/2024, Ile de Ré (France)
Title and Duration: “A two-scale model for two-phase flows including geometric variables and mass transfer”; 15 minutes
- **Invited speaker** at the INdAM Workshp INSiDEs (Innovations in the Numerical Treatment of Stiff Differential Equations)
Date and Location: 22/02/2024, Rome (Italy)
Title and Duration: “An asymptotic-preserving scheme for Euler equations with non-ideal gases”, 45 minutes
- Seminar HPC@Maths
Date and Location: 24/11/2023, Palaiseau (France)
Title: “Derivation of relations for interfacial area density in two-phase flows through the Stationary Action Principle”

- **Invited talk** in the minisymposium "Theoretical and computational aspects of discontinuous Galerkin methods" at European Conference on Numerical Mathematics and Advanced Applications (ENUMATH 2023)
Organizers: V. Aizinger and A. Rupp
Date and Location: 05/09/2023, Lisbon (Portugal)
Title and Duration: "A filtering monotonization technique for DG discretization of hyperbolic problems", 25 minutes
- Bi-annual congress of SIMAI 2023
Date and Location: 29/08/2023, Matera (Italy)
Title and Duration: "A filtering monotonization technique for DG discretization of hyperbolic problems", 25 minutes
- **Invited talk** in the minisymposium "Computational Advances in Earth System Modeling" at 17th U. S. National Congress on Computational Mechanics (USNCCM17)
Organizers: M. Perego, A. Salinger, and I. Tezaur
Date and Location: 25/07/2023, Albuquerque (USA)
Title and Duration: "An IMEX-DG solver for atmospheric dynamics with Adaptive Mesh Refinement", 20 minutes
- PDEs on the sphere 2023 (PDEs 2023)
Date and Location: 06/07/2023, Grenoble (France)
Title and duration: "An IMEX-DG solver for atmospheric dynamics based on deal.II framework", 30 minutes
- 7th ECCOMAS Young Investigators Conference (YIC2023)
Date and Location: 21/06/2023, Porto (Portugal)
Title and Duration: "An IMEX-DG solver for the compressible Navier-Stokes equations for non-ideal gases", 15 minutes
- **Invited seminar** for the series "Seminario di Modellistica Differenziale Numerica" at Sapienza Univeristà di Roma
Date and Location: 22/11/2022, Rome (Italy)
Title and Duration: "A filtering monotonization technique for DG discretizations of hyperbolic problems", 45 minutes
- 14th European Fluid Mechanics Conference (EFMC14)
Date and Location: 14/09/2022, Athens (Greece)
Title and Duration: "An IMEX-DG solver for the compressible Navier-Stokes equations for non-ideal gases", 12 minutes
- XVIII International Conference on Hyperbolic Problems: Theory, Numerics, Applications (HYP2022)
Date and Location: 21/06/2022, Malaga (Spain)
Title and Duration: "An IMEX-DG solver for the compressible Navier-Stokes equations with a general equation of state", 15 minutes
- 45ème Congrès National d'Analyse Numérique (CANUM 2020)
Date and Location: 16/06/2022, Evian-les-Bains (France)
Title and Duration: "An IMEX-DG solver for the compressible Navier-Stokes equations with a general equation of state", 15 minutes
- Bi-annual congress of SIMAI 2020+2021
Date and Location: 30/08/2021, Parma (Italy)
Title and Duration: "An accurate and efficient implicit Discontinuous Galerkin solver for the incompressible Navier-Stokes equations", 25 minutes
- Conference "Numerical methods for hyperbolic problems (NumHyp 2021)"
Date: 26/07/2021
Title and Duration: "An efficient and accurate implicit DG solver for the incompressible Navier-Stokes equations", 30 minutes

Outline of teaching activity

Responsible teacher

- Crash course on the use of MATLAB software for students - Spring Semester - A.Y. 2019-2020 and 2020-2021
Teaching load: 16 hours (per course)
Institution: Politecnico di Milano - Lecco Campus (Italy)

Exercise Session

- APM51656EP “Elements of measure theory and functional analysis” - A.Y. 2025-2026
Teaching load: 6 hours
Institution: École polytechnique (France)
Path: Master Applied Mathematics and Statistics (M1)
Responsible of the course: Prof. David Gérard-Varet
- MECCANICA RAZIONALE - A.Y. 2020-2021
Teaching load: 20 hours
Institution: Politecnico di Milano (Italy)
Path: Bachelor degree in Mathematical Engineering (Italian)
Responsible of the course: Prof. Maurizio Stefano Vianello
- MATHEMATICAL MODELS AND METHODS IN ENGINEERING [1] - A.Y. 2019-2020 and 2020-2021
Teaching load: 10 hours (A.Y. 2019-2020), 20 hours (A.Y. 2020-2021)
Institution: Politecnico di Milano (Italy)
Path: Master degree in Mathematical Engineering
Responsible of the course: Prof. Maurizio Stefano Vianello

Informatic Laboratory

- **Informatic Laboratory** for the course SHAPES AND ALGORITHMS: TOOLS FOR GENERATIVE DESIGN - A.Y. 2020-2021
Teaching load: 26 hours
Institution: Politecnico di Milano (Italy) *Responsible of the course:* Prof. Anna Scotti

Tutoring

- **Tutor of the final project** for the APM51051EP course “Systèmes dynamiques pour la modélisation et la simulation des milieux réactifs multi-échelles” (M2) - A.Y. 2024-2025, 2025-2026
Institution: École polytechnique (France)
Responsible of the course: Prof. Marc Massot
- **Tutor of the final project** for the MAP551 course “Systèmes dynamiques pour la modélisation et la simulation des milieux réactifs multi-échelles” (M2) - A.Y. 2023-2024
Institution: École polytechnique (France)
Responsible of the course: Prof. Marc Massot

Supervision activity Master thesis

1. Safira Leandra Liora Piasko (September 2022 - March 2023)
Institution: ETH Zurich (Switzerland)
Title: Discontinuous Finite Element Methods for Large Eddy Simulation (LES) of Incompressible Flows
Collaborators: Prof. Luca Bonaventura, Prof. Antonella Abbà, Prof. Christoph Schär
2. Letizia Bottani (September 2025 - February 2026)
Institution: Double program Politecnico di Milano (Italy) - Technical University of Denmark (Denmark) *Title:* Simulation of rotating flows with a high-order finite element framework for atmospheric dynamics
Collaborators: Prof. Luca Bonaventura, Dr. Tommaso Benacchio, Prof. Allan Peter Engsig-Karup

Projects, organizations and other info

- **Co-organisation of a minisymposium** at ICOSAHOM 2027 Congress
Title : High-order methods for environmental flows
Co-organizer : Luca Arpaia (CNR, Italy)
- 17/11/2025: **Co-organiser** of the practical training session "Hands-on Samurai", dedicated to introducing the samurai code to approximately 25 external participants from 10 different research institutions (held on site at CMAP)
- 07/07/2025 - 01/08/2025 : Participation to Modeling Summer Visit (MSV) Program as co-PI of a research project.
Title: A two-phase flow model with scale separation for the separated-to-disperse phase transition
Institution: NASA Ames
Funding: Partial support by Fondation Mathématique Jacques Hadamard (2k €) through the program Junior Scientific Visibility
- **Co-organization of seminars HPC@Maths** at CMAP - École polytechnique starting from November 2023
- **Co-organisation of a minisymposium** at SIMAI 2025 Congress
Title: Recent advancements in numerical methods and physical modelling of multi-material flows
Co-organizers: Niccolò Tonicello (SISSA), Federico Dalla Barba (Padua University), Marica Pelanti (ENSTA)
- 28/08/2023 - 01/09/2023: **Staff member** of Bi-annual congress of SIMAI 2023
- Solver for incompressible Navier-Stokes equations included in the **official deal.II code-gallery**
https://dealii.org/developer/doxygen/deal.II/code_gallery_NavierStokes_TRBDF2_DG.html
- PI of the EuroHPC Benchmark project EHPC-BEN-2024B03-045
Title: A high-order efficient and scalable solver for atmospheric dynamics using non-conforming and curved meshes
- PI of the EuroHPC Development project EHPC-DEV-2024D10-054
Title: A high-order efficient and scalable solver for NWP using dynamically adaptive non-conforming meshes
- PI of the ISCRA-C Project FEM-GPU
Title: Finite Element Methods for GPU architectures
- PI of the ISCRA-C Project NUMNETF
Title: NUMerical Methods for Non-Equilibrium Two-phase Flows
Research Group: Paolo Francesco Barbante, Luca Bonaventura
Amount: 1 720 €(=86k core hours on G100 cluster, CINECA, Italy)
- PI of the ISCRA-C Project SIDICONS
Title: Semi-Implicit Discretizations for Incompressible and COmpressible Navier-Stokes equations
Research group: Antonella Abbà, Paolo Francesco Barbante, Luca Bonaventura
